

Drum Screen RS.

Drum Screen RS separates solids from water.

WATER TREATMENT
PRODUCTS

A Hydria Water company

Drum Screen RS.

Drum Screen RS separates solids from water.

Advantages

- Simple robust quality machine for pumped flows.
- Separated dirty/clean side eliminates "carry over".
- Can be used as pre treatment before membrane filtration.
- Easy changeable & alternative filter/screen/slot panels.
- Enclosed, safe & hygienic with easy to open access doors.

Function

The water is filtered from the inside of the drum. The drum is inclined and screw flights inside it convey the separated solids out by the drum rotation. A brush and flush system cleans the perforations.

Specifications

Perforation	0,01-10mm
Capacity	10-200 l/s
Motored gears	SEW and Nord
Material	EN1.4301, EN1.4404 or by client demand

MN has hundreds of international references. We are proud of our extensive knowledge and continuous development of the most innovative solutions available on the market of screens and screenings handling equipment within water and waste water treatment.

We have been on the market for more than 30 years and many of our well-engineered products has been benchmarks for the entire industry.

We design and manufacture all of our products in our own factories in Sweden.

We are certified with the latest ISO- and CE- standards.

Swedish steel working traditions and the highest quality.

Towards a cleaner world.
