Multi Rake MR.

Multi Rake MR is a modern mechanically raked coarse bar screen that separates debris and large screenings from water.

Advantages

- Curved bars at the bottom for higher capacity and optimum material conveying.
- Replaceable bars, spacing and rakes elements.
- Stainless steel chains and sprockets.
- Module section design for simple installation and delivery.
- Quality construction from thick certified stainless steel material.
- Enclosed, safe and hygienic with easy to open access doors.

Function

It's used in pumping stations, water intakes, waste water treatment plants. Conveyor chain drive with multiple rakes gives fast cleaning cycles giving high flow and conveying capacities.

Curved bars at the bottom for higher capacity and optimum material conveying.

Replaceable bars, spacing and scrapers. Stainless steel chains and sprockets.

Specifications

Discharge height	1-50 m
Width	300-4000 mm
Bar spacing	12-100 mm
Capacity	10-10000 l/s
Motored gears	SEW och Nord
Material	EN1.4301, EN1.4404 or by client demand

MN has hundreds of international references. We are proud of our extensive knowledge and continuous development of the most innovative solutions available on the market of screens and screenings handling equipment within water and waste water treatment.

We have been on the market for more than 30 years and many of our well-engineered products has been benchmarks for the entire industry.

We design and manufacture all of our products in our own factories in Sweden.

We are certified with the latest ISO- and CE- standards.

Swedish steel working traditions and the highest quality.

Towards a cleaner world.
